

Fraction Word Problems (Add and Subtract Only) - Step-by-Step Lesson**Lesson 1 Fraction Problem:**

1) Drew drove his car $\frac{1}{2}$ of a kilometer from his school to the market. Then he drove $\frac{2}{14}$ of a kilometer from the market to the library. How many total kilometers did he drive?

Explanation:

Step 1) First we need to know what is asked in question:

"How many kilometers did Drew drive in total?"

Step 2) If we use the number line below to show a distance of a kilometer, we will see that Drew's first ride was $\frac{1}{2}$ kilometer or $\frac{7}{14}$ of a kilometer. The second ride was $\frac{2}{14}$ a kilometer more.

That means that Drew traveled a total of $\frac{9}{14}$ of a kilometer.
